

EECS 2311: CRM Planning Map

Vision Statement

ClubRM is a simple Customer Relationship Management (CRM) tool built for student clubs. It helps organizations organize their contacts, track their history with professionals, and stop losing valuable network data when student leaders graduate.

Student clubs are the bridge between students and the professional world (sponsors, mentors, speakers). But clubs have a major flaw. Currently, valuable relationships are "owned" by individual students, not the club. When a President or VP graduates, their personal connections and email history disappear with them. The new team has to start from scratch every September, often awkwardly introducing themselves to professionals who have already worked with the club. Important contact info is currently messy- scattered across random spreadsheets, personal messages, and lost email threads.

We want student clubs to operate with the organization and memory of a real business. ClubRM serves as a central vault for a club's network. ClubRM allows a club to look up a contact like a recruiter or a guest speaker, and instantly see every interaction the club has ever had with them. This means when a new executive team takes over, they aren't looking at a blank page, they are building on the previous team's work. We are replacing the chaos of spreadsheets with a clean, easy-to-use tool that tracks who people are and what they have done for the club.

Our primary users are student club leaders. This includes Presidents, VPs, and anyone responsible for finding sponsors or speakers. The secondary beneficiaries are future club members, who will inherit an organized history instead of a complete mess.

This is useful for several reasons. The relationship stays with the club, even when the student leaves. It stops clubs from accidentally emailing the same sponsor twice or forgetting past promises, making the club look more professional. It also saves time and energy. Student volunteers can focus on planning events rather than hunting for lost email addresses.

For this project to be successful, the Minimum Viable Product must be able to do several things. Users should be able to easily add, view, edit, and delete contact profiles. A timeline feature where users can log meetings, emails, and notes for each contact would be useful. They should be able to quickly find people based on labels (e.g., "Sponsor," "Alumni," "Speaker"). One club shouldn't see another club's data. (ie, Club A's sponsors are private from Club B). Finally, the interface must be simple enough that a student leader can figure it out immediately without a manual/walkthrough.

Big User Story (Taziz)

Centralized Contact and Organization Management

As a Club Executive (VP/President), I want to maintain a centralized, persistent database of industry professionals and organizations so that the club's network is preserved independently of the current leadership team, preventing data loss when executives graduate. This includes the ability to categorize contacts (sponsors, speakers, mentors) and view their affiliation details.

Priority: High

Cost: 2 weeks

Big User Story (Yusuf)

Confidentiality with CRM access

As a VP of Communications, I would like ClubRM to ensure that only authorized personnel are able to make use of ClubRM's functions to ensure that there is a certain level of privacy and authority when it comes to maintaining contacts. Club executives, like myself, would like the CRM to be used in order to maintain good standards relations with clients on a personal level so that there is that ease with communication. In order for there to be ease with communication, the pool of those authorized to do so needs to be small so as not to overwhelm the clients.

Priority: Medium

Cost: 1 week

Iteration 1 User Stories

User Story (Taziz)

Add New Professional Contact

As a VP of External Affairs, I want to manually input a new professional's details (Name, Job Title, Organization, Email, LinkedIn URL) into the system so that I can quickly have a digital record of a contact I made at an event before I lose their business card or forget the context. The form must collect: Full Name, Email, Organization, Job Title, and LinkedIn URL. The system must prevent submission if the email format is invalid (e.g., missing "@"). I should be able to assign a tag (e.g., "Potential Speaker") during creation. Clicking save closes it, a "Success" popup appears, and the new contact is visible at the top of the contact list.

Priority: High

Cost: 2 days

User Story (Yusuf)

User Login Configuration

As a Club Coordinator, I would like to have a fully featured Login Screen that would handle Account creation well through the "Sign Up" button. Afterwards, I would like the Login Screen to have features like the "Show Password" feature that would make it easier for me to remember what password I am inputting as well as the required length. I would also like for there to be a "Forgot Password" link so that I would be able to change up my password however I would like. A standard password for security purposes would need to have at least 1 special character, 1 capital letter, length greater than or equal to 8, and numerical characters as well.

Sophisticated Sorting

As a Club Executive (VP/President), I would like to be able to view emails, contact profiles, and notes of my club on a central hub each separated into their own tabs. On each tab, I can Sort by Date, and Sort by Name, as well as both in reverse. Additionally, I want to be able to (optionally) Group these categories in a similar manner. On each entry, the Date Modified should be displayed. Furthermore, I should be able to further subdivide each tab by labels currently assigned, add more, or edit the ones that are currently listed. This submenu should list the pre-existing labels already in-use, allowing for easier consistency. It's important that

the system remembers my configuration of the information when I log off and return to it in the future.

Cost: 4 days

User Story (Ashdeep)

View Professional Contact Profile

As a Club Executive (VP/President), I want to view the full profile of a professional contact from the contact list so that I can quickly understand who they are, their role, and their relationship with the club before reaching out or planning an event.

When I click on a contact from the contact list, I should be able to see their Full Name, Job Title, Organization, Email, LinkedIn URL, assigned tags, and the date the contact was added. The information should be displayed clearly on a single page or panel. I should be able to return to the contact list without losing my current sorting or filtering settings.

Priority: High

Cost: 1.5 days

User Story (Shivam)

Edit Existing Professional Contact

As a VP of External Affairs, I want to edit the details of an existing professional contact so that I can keep their information accurate if their role, organization, or contact details change.

From a professional contact's profile, I should be able to update fields such as Job Title, Organization, Email, LinkedIn URL, and assigned tags. The system must check the email format before allowing changes to be saved. After saving, a confirmation message should appear, and the updated information should be immediately visible in the contact profile and contact list.

Priority: Medium

Cost: 2 days

Planning Map

Detailed User Story	Who it's assigned to
Add New Professional Contact	Yusuf Garba
View Professional Contact Profile	Shivam Patel
Sophisticated Sorting	Naeem Baig
User Login Configuration	Daniel Kyere
Add New Professional Contact	Ashdeep Ashdeep Singh
Centralized Contact and Organization Management	Taziz Ashan
